Overall Astrological Forecast for the Wood Dragon Year

甲辰年整体形势预测

THE WOOD DRAGON YEAR 2024

The Almanac predicts scarcity in essential foods and commodities. It is really important to protect and conserve the limited resources and reduce wasteful habits. Always treasure and be grateful of what we have, and face the year with calmness.

Floods, waterlogged farm lands and landslides are predicted during the first half of the year. Be mindful of your personal safety and keep a lookout for others during times of extreme weather.

There will be great disparity in the distributions of resources. This cause unusual spike in commodity prices in some countries. For business people, it can be a business opportunity if you can spot them early by arbitraging the price differences between different countries. But for the common folks, need to be a smart consumer so you will not be overspending and plan for your longer term needs.

Winter season will be unusually cold. Nip the potential health issues in their buds, by pro-actively managing your conditions with regular check-up.

There are signs of contagious diseases spreading in South East Asia. Bearing in mind the basic principle of getting the best out of every situation, i.e. unity is strength and face the challenges together to emerge stronger than ever.
